Box 11:

The Applicant argues that the overall disclosure of JP '474 fully supports the limitation of "using alignment marks formed on said integrated mask and said single substrate" in claim 11. However, the present specification does not provide a special definition for "alignment marks", so the term is given its ordinary meaning. Thus, the limitation in claim 11 encompasses "using alignment marks formed on [the] integrated mask" to align the mask to a gantry assembly (see U.S. Patent No. 4,676,193 to Martin). The alignment marks 60 of Martin is used to align the mask assembly in Fig. 21 to the gantry assembly in Fig. 22 to form a combined assembly of Fig. 23 (col. 18, line 54-col. 19, line 34). The gantry assembly holds the substrate 150. JP '474 does not have a disclosure for "using" the alignment marks on the mask for such an alignment method. Because claim 11 requires a limitation broader than the disclosure of JP '474, the claims do not receive the benefit of the earlier foreign priority date. Thus, Martin is still considered prior art.

The Applicant argues that it is impossible for the rejection to define "n" in a way that is different from the definition specifically recited in the Applicant's claim 11. However, "n" is merely the number of organic EL devices on a single substrate, as defined in claim 11. Clark '690 teaches that the mask assembly has 4 deposition masks (i.e., m = 4) and that each mask has a plurality of deposition apertures (i.e., k is greater than 2), thereby satisfying the equation of $n = m \times k$. The organic EL devices comprise a an EL layer formed between a lower and an upper electrode.

The Examiner notes that the Comparison Chart does not provide a comparison for the disclosure of JP '494 with present claim 12.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jimmy Lin whose telephone number is 571-272-8902. The examiner can normally be reached on Monday thru Friday 8AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tim Meeks can be reached on 571-272-1423. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
